Two-Way Recording

You can manually record an ongoing conversation to your voice-mail box. The recording can then be played back over your phone, or sent to you via email.

WARNING:

In many localities, it is illegal to record a phone call without first notifying the person or persons being recorded. Florida is a “two party consent” state which means both parties must know that they are being recorded. Consult your lawyer for more information.

Recording a conversation

- 1) While on an active call, press the “Page Right” button shown in the above picture. This will bring up another set of options for the soft-keys.
- 2) Press the soft-key below the word “Record”. Your conversation is now being recorded.
- 3) The recorded conversation will be automatically sent to your voice-mail box once you hang up.

-or-

You can press the “Page Right” then select the soft-key below “Record SP” to stop the recording. You can then continue with the conversation.

Note: Two-Way recording is done on a per-call basis. Should you choose to record a call, the next call *will not* be automatically recorded.
